Essay from the year 2011 in the subject English - Discussion and Essays, grade: 2,0, Friedrich-Alexander University Erlangen-Nuremberg, language: English, abstract: Introduced in 1992, school league tables had the purpose to inform parents about attendance rates and pass-rates in public exams. The Labour party wanted to give the parents the possibility to see the difference between the schools and to assess their choices realistically. The school league tables include data about achievement and attainment from different sources, for example the Sats, the GCSE and the A-Level qualifications. School league tables can give snapshot of the average attainment in exams, depending on the measure used to draw it up. But it is not always easy to interpret the available data.

Academic Paper from the year 2018 in the subject Pedagogy - Common Didactics, Educational Objectives, Methods, language: English, abstract: This work focuses on Future Education and its characteristics. Thereby it will have a closer look at the advantages and disadvantages of Online Education. Over the past several decades the rapid technological advancement has had an impact on every aspect of human life and education has been one of the most important beneficiaries of this phenomenon. However as technology continues to take a central role in today's society, educational experts and professionals have raised concerns on the possible impacts that this will have not just on the system but also on the students and the society as whole. Some critics arguing that technology would in the future replace human intelligence. This, they argue would be as a result of the assumption of control by technologies over a

considerable measure of undertakings and capacities that educators have been educating their students in the conventional education system. It is the position of this paper that despite the rise of technology and the central role it is now playing in the society, Education faces no threat, rather with the changing world; technology will only be driving force behind the restructuring of the education model as it aligns itself to the global changes.

Bachelor Thesis from the year 2008 in the subject Business economics - Marketing, Corporate Communication, CRM, Market Research, Social Media, grade: 1,2, Maastricht University (School of Business and Economics), course: -, language: English, abstract: 1. General introduction Up to now, it has always been the task of marketing to be close to the customer and to know how to reach him in order to ultimately increase sales of the company's product or service. This focus on customer acquisition is widespread among companies, and many companies consider this to be sufficient in order to survive in the business world.

Nonetheless, a vital flaw of this common view is that there is more than just focusing all efforts on acquiring new customers - That is, convincing the customer that it pays for him/her to continue doing business with the provider, which is called customer retention. Enter Customer Relationship Management (CRM). Throughout this paper, the definition of a CRM will be equivalent to the interpretation by Payne and Frow (2005), who state that CRM is a strategic approach that is concerned with creating improved shareholder value through the development of appropriate relationships with key customers and customer segments (Payne and Frow, 2005a). In the 1990s, organizations recognized the need for not relying on customer acquisition all alone, and stressing the relationship with the customer became imperative in the business world's strategic orientation. Unfortunately,

implementing CRM systems turned out to require more work than the plain desire to be chosen as a provider over and over again. A great source of uncertainty was the vague definition of relationship management itself. Another pitfall was how to establish a CRM system in an organization. As relationship management was not up to executives' expectations, many companies were disappointed by the results - And yet, there were companies that succeeded in implementing a CRM system. "... remarkable account of the impact of postmodern philosophy on the question of ethics and politics... commendable also for its balanced view of Heidegger's relationship to politics and ethics.... an excellent account of Heidegger's philosophical understanding of technology..." -- Choice This book takes as its point of departure the question of ethics: that values and their pursuit in the West often perpetuate their own worst enemies. At issue are the dangers in the structures and movements of images, values, and ways of knowing that are most intimately a part of our lives. This book explores afresh the long-standing interest, and emphasis on, the 'special' capacities of primates. Some of the recent discoveries of the higher cognitive abilities of other mammals and also birds challenge the concept that primates are special and even the view that the cognitive ability of apes is more advanced than that of nonprimate mammals and birds. It is therefore timely to ask whether primates are, in fact, special and to do so from a broad range of perspectives. Divided into five sections this book deals with topics about higher cognition and how it is manifested in different species, and also considers aspects of brain structure that might be associated with complex behavior.

Testing and diagnosis of hepatitis B (HBV) and C (HCV) infection is the gateway for access to both prevention and treatment services, and is a crucial component of an effective response to the hepatitis epidemic. Early identification of persons with chronic HBV or HCV infection enables them to receive the necessary care and treatment to prevent or delay progression of liver disease. Testing also provides an opportunity to link people to interventions to reduce transmission, through counselling on risk behaviors and provision of prevention commodities (such as sterile needles and syringes) and hepatitis B vaccination. These are the first WHO guidelines on testing for chronic HBV and HCV infection and complement published guidance by WHO on the prevention, care and treatment of chronic hepatitis C and hepatitis B infection. These guidelines outline the public health approach to strengthening and expanding current testing practices for HBV and HCV, and are intended for use across age groups and populations.

A tremendous amount of money is being steered toward personalized learning (PL) initiatives at the federal, state, and local levels, and it is important to understand the return on the investment in students' futures. It is only through rigorous discussions that educators and policymakers will be able to determine if PL is a passing fad or if it possesses the staying power necessary to show a positive impact

on student achievement. Evaluation of Principles and Best Practices in Personalized Learning is a critical scholarly publication that explores the modern push for schools to implement PL environments and the continuing research to understand the best strategies and implementation methods for personalizing education. It seeks to begin creating a standardized language and standardized approach to the PL initiative and to investigate the implications it has on the educational system. Additionally, this book adds to the professional discussion of PL by looking at both the advantages and disadvantages of PL, the teacher's role in PL, creating a PL program to scale, the role of technology and PL, the special education population and PL, emerging research on PL, and case studies involving PL. Featuring research on a wide range of topics such as blended learning, preservice teachers, and special education, this book is ideal for teachers, administrators, academicians, policymakers, researchers, and students.

Near Earth objects (NEOs) have the potential to cause significant damage on Earth. In December 2018, an asteroid exploded in the upper atmosphere over the Bering Sea (western Pacific Ocean) with the explosive force of nearly 10 times that of the Hiroshima bomb. While the frequency of NEO impacts rises in inverse proportion to their sizes, it is still critical to monitor NEO activity in order to

prepare defenses for these rare but dangerous threats. Currently, NASA funds a network of ground-based telescopes and a single, soon-to-expire space-based asset to detect and track large asteroids that could cause major damage if they struck Earth. This asset is crucial to NEO tracking as thermal-infrared detection and tracking of asteroids can only be accomplished on a space-based platform. Finding Hazardous Asteroids Using Infrared and Visible Wavelength Telescopes explores the advantages and disadvantages of infrared (IR) technology and visible wavelength observations of NEOs. This report reviews the techniques that could be used to obtain NEO sizes from an infrared spectrum and delineate the associated errors in determining the size. It also evaluates the strengths and weaknesses of these techniques and recommends the most valid techniques that give reproducible results with quantifiable errors.

materials cheaply without any limit, and without any restrictions. It also gave the chance to make a free selection and comparison between the prices of goods at the electronic department stores throughout the Internet. All such facilities are given to the consumers in a very short time without causing them to leave their office or home. In addition, the Electronic Marketing has exterminated the monopoly of goods and materials, all such acts of course are for the consumer's benefit. However, in addition to such advantages there are many disadvantages of such type of marketing; the Electronic Marketing has deleted the privacy of the consumer, because all of his movements through the Internet have been divulged and under control, in addition to lack of exclusive security through the Internet. Accordingly, many losses equally occurred to the customer and the merchant due to such acts of hackers who reveal the information and credit cards details. In addition, the Electronic Marketing caused many merchants, agents and monopolists to be vanquished because it gave the chance for direct communications between the producer and the consumer without passing through them; as such, many of such merchants have been yielded away from the way of this new technology. The Electronic Marketing was able to cause an upset down in many concepts and standards of economic science that have existed for so many years. Doors are still open for every new in this assumption and endless world as there are no limits that can stop such human ambition.

This synthesis study is intended to inform airport operators, stakeholders, and policy makers about common use technology that enables an airport operator to take space that has previously been exclusive to a single airline and make it available for use by multiple airlines and their passengers. Common use is a fundamental shift in the philosophy of airport space utilization. It allows the airport operator to use existing space more efficiently, thus increasing the capacity of the airport without constructing new gates, concourses, terminals, or check-in counters. This synthesis was prepared to help airport operators, airlines, and other interested parties gain an understanding of the progressive path of implementing common use, noted as the common use continuum. It identifies advantages and

The American Anti-Vivisection Society (AAVS) petitioned the National Institutes of Health (NIH) on April 23, 1997, to prohibit the use of animals in the production of mAb. On September 18, 1997, NIH declined to prohibit the use of mice in mAb production, stating that "the ascites method of mAb production is scientifically appropriate for some research projects and cannot be replaced." On March 26, 1998, AAVS submitted a second petition, stating that "NIH failed to provide valid scientific reasons for not supporting a proposed ban." The office of the NIH director asked the National Research Council to conduct a study of methods of producing mAb. In response to that request, the Research Council appointed the Committee on Methods of Producing Monoclonal Antibodies, to act on behalf of the Institute for Laboratory Animal Research of the Commission on Life Sciences, to conduct the study. The 11 expert members of the committee had extensive experience in biomedical research, laboratory animal medicine, animal welfare, pain research, and patient advocacy (Appendix B). The committee was asked to determine whether there was a scientific necessity for the mouse ascites method; if so, whether the method caused pain or distress; and, if so, what could be done to minimize the pain or distress. The committee was also asked to comment on available in vitro methods; to suggest what acceptable scientific rationale, if any, there was for using the mouse ascites method; and to identify regulatory requirements for the continued use of the mouse ascites

method. The committee held an open data-gathering meeting during which its members summarized data bearing on those questions. A 1-day workshop (Appendix A) was attended by 34 participants, 14 of whom made formal presentations. A second meeting was held to finalize the report. The present report was written on the basis of information in the literature and information presented at the meeting and the workshop. *How Students Learn: Science in the Classroom* builds on the discoveries detailed in the best-selling *How People Learn*. Now these findings are presented in a way that teachers can use immediately, to revitalize their work in the classroom for even greater effectiveness. Organized for utility, the book explores how the principles of learning can be applied in science at three levels: elementary, middle, and high school. Leading educators explain in detail how they developed successful curricula and teaching approaches, presenting strategies that serve as models for curriculum development and classroom instruction. Their recounting of personal teaching experiences lends strength and warmth to this volume. This book discusses how to build straightforward science experiments into true understanding of scientific principles. It also features illustrated suggestions for classroom activities.

American attitudes to Shakespeare, from Revolutionary and Transcendentalist approaches through to the influential interventions of professional American critics in the early twentieth century. The extraordinary and bizarre contribution to the Shakespeare debut by Delia Bacon is exemplified by the inclusion of her 1856 article which is reprinted in its entirety. Americans on Shakespeare charts the emergence of an American literary tradition, and the gradual appropriation of Shakespeare as part of the American search for cultural identity; an identity whose domination is set to continue into the twenty-first century.

The nation has compelling reasons to reduce its consumption of oil and emissions of carbon dioxide. Plug-in hybrid electric vehicles (PHEVs) promise to contribute to both goals by allowing some miles to be driven on electricity drawn from the grid, with an internal combustion engine that kicks in when the batteries are discharged. However, while battery technology has made great strides in recent years, batteries are still very expensive. Transitions to Alternative Transportation Technologies--Plug-in Hybrid Electric Vehicles builds on a 2008 National Research Council report on hydrogen fuel cell vehicles. The present volume reviews the current and projected technology status of PHEVs; considers the factors that will affect how rapidly PHEVs could enter the marketplace, including the interface with the electric transmission and distribution system; determines a maximum practical penetration rate for PHEVs consistent with the time frame and factors considered in the 2008 Hydrogen report; and incorporates PHEVs into the models used in the

Making life-altering decisions using astrology, in general, and the zodiac and horoscopes, in particular, can be extremely complicated for the average person, who is not an astrologer and thus, not acquainted with celestial (or planetary) movement and influences. Therefore, it is essential to look at the advantages and disadvantages that are created by globalization. The question is to ask, if globalization really has the force to make the world more equal and who are the winners or the losers of it ? The available seminar paper tries to answer that question with a critical analysis of the topic.
