Aquarium basically, is a receptacle for maintaining aquatic organisms, either freshwater or marine, or a facility in which a collection of aquatic organisms is displayed or studied. The earliest known aquarists were the Sumerians, who kept fishes in artificial ponds at least 4,500 years ago; records of fish keeping also date from ancient Egypt and Assyria. The Chinese, who raised carp for food as early as 1000 BCE, were probably the first to breed fish with any degree of success. Their selective breeding of ornamental goldfish was later introduced to Japan, where the breeding of ornamental carp was perfected. The ancient Romans, who kept fish for food and entertainment, were the first known marine aquarists; they constructed ponds that were supplied with fresh seawater from the ocean. Although goldfish were successfully kept in glass vessels in England during the middle 1700s, aquarium keeping did not become well established until the relationship between oxygen, animals, and plants became known a century later. Prior to the middle of the 19th century, the term aquarium was applied in botany to describe a container used for growing aquatic plants. Although French-born naturalist Jeanne Villepreux-Power invented the first recognizable glass aquarium in 1832, it was in the works of British naturalist Philip Gosse, however, that the term first took on its modern meaning as a vessel in which aquatic animals, as well as plants, can be held. His work aroused increased public interest in aquatic life. By 1850 the keeping of fishes, amphibians, and reptiles had become useful in the study of nature. The first display aquarium was opened to the public in 1853 at Regent's Park in London. It was followed by aquariums in Berlin, Naples, and Paris. P.T. Barnum, the circus entrepreneur, recognized the commercial possibilities of living aquatic animals and, in 1856, opened the first display aquarium at the American Museum in New York City as a private enterprise. By 1928 there were 45 public or commercial aquariums throughout the world, but growth then slowed and few new large aquariums appeared until after World War II. Many of the world's principal cities now have public aquariums as well as commercial ones. Another category encompasses those aquariums that serve chiefly as research institutions. Among the best known of the latter are those at Naples; the Oceanographic Museum of Monaco; Plymouth Marine

The whole aquascaping process may seem difficult to accomplish in the beginning. But it's not as hard as it looks if you follow a few simple steps. Like in the past, you can use different types of plants, rocks, driftwood, and substrate to create a beautiful scene in your aquarium. Obtaining the right balance between different elements used in aquascaping and creativity is what makes it so interesting to achieve. However, a few simple steps can help you get into aquascaping even though it's a new hobby. Aquascaping is all about creating a scene and usually, less is more. Variety is the key to a successful aquascape, but most of the time the result is that variety doesn't mean using a lot of different plants. Even if you create a theme, you don't want your aquascape to look boring. Remember, the key role in aquascaping! It's very important to give a sense of harmony to your tank, so try to have a few different types of plants, rocks, driftwood, and substrate. Avoid using only one type of plant, rock, or driftwood. Instead, use a variety of different types. If you're not sure, it's better to start with a few simple types and see how they look together. If you experiment, you will get it.
